

HyFlex

What is HyFlex?

HyFlex is a course design model. It presents the components of hybrid learning in a flexible course structure that gives students the option of attending sessions in the classroom, participating online, or doing both. Students can change their mode of attendance weekly or by topic, according to need or preference. Models like HyFlex, which present multiple paths through course content, may work well for courses where students arrive with varying levels of expertise or background in the subject matter. Courses built on the HyFlex model help to break down the boundary between the virtual classroom and the physical one. By allowing students access to both platforms, the design encourages discussion threads to move from one platform to the other.

How does Hyflex Work?

The HyFlex model is a conceptual framework that can be easily implemented with current existing courses at any institution. The HyFlex model pairs well with course management software and other Online course infrastructure technologies, like Teams and Moodle. Courses that have historically been offered face-to-face in a classroom can now be offered both online and in a traditional classroom setting, allowing each student to choose the modality that best fits their particular learning style and needs, based on the subject matter and content being presented.
